FlexiRova

Workforce management system / Technology stack

A temporary-work marketplace connecting workers with nearby shifts and helping employers manage hiring.

LAYER	TECHNOLOGY
Frontend	React 19 + TypeScript
Full-stack framework	Next.js 16.4.3, App Router and API route handlers
Styling	Tailwind CSS 4, custom light and dark themes
Database	PostgreSQL through Supabase
Location search	PostGIS for nearby-job distance filtering
Authentication	Supabase Auth: email/password login and verification
Forms and validation	React Hook Form + Zod
Icons and notifications	Lucide React + Sonner
Local infrastructure	Node.js, npm, Docker Desktop and Supabase CLI
Testing	Vitest, Playwright and axe accessibility checks
Code quality	ESLint, Prettier and TypeScript checks

How it fits together

The frontend and backend live together in Next.js. Supabase provides authentication and database services, with database policies controlling access. PostGIS supports location-based job discovery.

Current scope: AI integration and public hosting are not configured yet.

Source: the project package.json, README.md and implementation files inspected on 24 October 2026. This summary describes the implemented stack; it is not a fresh runtime test report.
